GE-IDX Flowcast 4.0 Update

Important information concerning your IDX System Password

In GE-IDX Flowcast 4.0, it is important to know that your password is now required to be at least 8 characters or more, and is case sensitive. Your password can still be a combination of both letters and numbers. Passwords still expire every 90 days in our character based version of Flowcast 4.0.

You will not be required to change your password when the system is updated April 5, 2008. When your password expires as it normally does every 90 days, simply use the new 8 character or more rule.

If you have any questions regarding the new enhancement affecting security, please call our UMCET Help Desk at 305-243-3665.
